

HRMS Admin Setup Guide

Quadratic Systems Inc — Human Resource Management System

Version 1.0 | September 2026 | Confidential — Internal Use Only

Admin Credentials

1. What is the Admin Account?

The Administrator account in Quadratic HRMS is the highest-privilege user role. It has unrestricted read/write access to all modules including Workforce, Payroll, Documents, Timesheets, Department management, and system-level User Account provisioning.

Because the Admin account is NOT auto-created during normal employee registration, it must be seeded manually using a secure command-line script. This guide walks you through the complete process.

2. Prerequisites

- * Node.js v18+ installed and available in your system PATH.
- * MongoDB running locally on `mongodb://localhost:27017` (or remote URI set in `.env`).
- * HRMS Back-End project present at: `Back-End/HRMSBackend/`
- * `.env` file correctly configured with `MONGO_URL` and `JWT_SECRET`.

3. .env Configuration

Ensure `Back-End/HRMSBackend/.env` contains the following keys:

```
MONGO_URL=mongodb://localhost:27017/HRMS
```

```
PORT=3000
```

```
JWT_SECRET=my_super_secret_key_123456789
```

TIP:

Change `JWT_SECRET` to a long random string before deploying to production.

4. Creating the Admin Account (createAdmin.js)

Step 1 — Open a terminal in the back-end directory

```
cd Back-End/HRMSBackend
```

Step 2 — Run the admin creation script

```
node scripts/createAdmin.js --email admin@hrms.com --password Admin@1234
```

On success you will see:

Connected to MongoDB mongodb://localhost:27017/HRMS

New Admin account created / Existing account updated to Admin

Email : admin@hrms.com

Password : Admin@1234

Role : admin

NOTE:

If an account with that email already exists, the script will update its role to 'admin' and reset the password.

Default Login Credentials

Use these credentials to log in to the HRMS portal for the first time.

Email : admin@hrms.com

Password : Admin@1234

SECURITY:

Change the default password immediately after first login via Account Settings.

If a regular employee or HR account already exists and you want to elevate its role:

```
node scripts/promoteAdmin.js existing.user@company.com
```

This only changes the 'role' field to 'admin' without touching the password.

```
npm run admin:reset-password
```

You will be prompted interactively to enter a new password. The script hashes it with bcrypt (10 rounds) before saving to the database.

/admin/dashboard

Executive KPIs, real-time workforce analytics.

/admin/accounts

Create HR/Employee accounts, manage roles.

/hr/employees

Full employee roster, CRUD operations.

/hr/departments

Manage departments and team structure.

[/hr/dashboard](#)

Attendance monitoring & HR analytics.

/hr/payroll

Run payroll, view pay slips, export reports.

[/hr/timesheets](#)

Review & approve employee timesheets.

/hr/documents

Upload, verify & manage compliance docs.

Organization Tree

/organization

Visual org-chart & hierarchy explorer.

/employee/profile

Admin's own personnel profile.

Problem: 'Invalid email or password'

Solution: The account does not exist or password is wrong. Re-run createAdmin.js to reset.

Problem: 'MongoServerError: connect ECONNREFUSED'

Solution: MongoDB is not running. Start it with: `mongod` or `net start MongoDB`

Problem: 'Cannot find module ../models/User'

Solution: Run the script from Back-End/HRMSBackend/ directory, not from inside scripts/.

Problem: Account exists but role is still employee

Solution: Run `promoteAdmin.js` with the account email to elevate the role.

Create / Reset Admin:

```
node scripts/createAdmin.js --email admin@hrms.com --password Admin@1234
```

Promote Existing User:

```
node scripts/promoteAdmin.js user@email.com
```

Reset Admin Password:

```
npm run admin:reset-password
```

Start Backend Server:

```
npm run dev    (inside Back-End/HRMSBackend/)
```

Start Frontend Dev:

```
npm run dev    (inside Front-End/)
```
